

Gutter System Care and Maintenance

- ✓ Gutters should be cleaned at least twice a year, preferably in spring and fall.
- ✓ Clean roof and inside of gutters of all debris
- ✓ While removing debris, check for corrosion, holes, dents, sagging and leaking areas and missing, loose or bent hangers.
- ✓ If downspouts are clogged, loosen debris from the bottom of the pipe, and then unstop the downspout by running up a garden hose or a plumber's snake from the bottom.
- ✓ Ensure system is free flowing and functional by flushing gutters with a garden hose or a gutter cleaning tool after cleaning .This will verify whether the gutters are draining well or if they are holding standing water.

Please note that damages resulting from failure to provide reasonable and necessary maintenance by regularly cleaning of debris from roof and inside of gutters nullify workmanship warranty.
